

QB-TimeWarp — Session Resume Guide

Purpose: This document contains all connection details, credentials, and paths needed to resume work on this project in a new session.

WORKING COPY SYSTEM — ORIGINALS ARE NEVER TOUCHED

QB-TimeWarp automatically creates working copies before any operations:

```
Desktop (ORIGINALS — READ-ONLY, NEVER MODIFIED):
├─ Joshua's Gold Coast\ ← QB 2023 source (30MB test file)
├─ Blank Template\ ← QB 2021 target
├─ Air Masters\ ← QB 2023 production (360MB — DO NOT USE)

C:\QB-TimeWarp\Working\ (WORKING COPIES — all operations happen here):
├─ Source\ ← Copy of Joshua's Gold Coast .qbw
├─ Target\ ← Copy of Blank Template .qbw
```

Commands:

- --refresh — Force re-copy from originals to Working folders
- --cleanup — Delete Working folders (originals untouched)

See `SAFETY_FEATURES.md` for full details on multi-layer protection.

CRITICAL OPERATIONAL DETAILS — READ FIRST

QuickBooks Company File Passwords

Company File	Password
Air-Masters-QB-2023.qbw	3825You171
Josh Safty 2021.qbw	3825You171
Blank Template	Fl0640098!@!

Enter these passwords when QuickBooks prompts on opening company files.

Operational Rules — ALWAYS FOLLOW

1. **Keep QB windows VISIBLE during execution** — Do NOT minimize QuickBooks. Popups will appear that need monitoring and handling.
2. **This is COLLABORATIVE** — The user is actively watching the VM screen and programming alongside the AI. Check in with the user regularly — they can see things automation misses.
3. **Don't barrel through** — Pause at key stages and coordinate with the user before proceeding.

4. **Monitor for popups** — QuickBooks generates permission dialogs, multi-user warnings, and other popups that can block SDK operations silently. See `POPOPUP_HANDLING.md` for details.
5. **Passwords file** — All credentials are also stored in `PASSWORDS.txt` in the project root for quick reference.

1. Windows VM Connection

Detail	Value
RDP Address	aiagent.hostedremotedesktop.com:4420
Username	VM-4420-11\AIAgent
Password	01Hello02!@!
Network	2 Gbps fiber connection
OS	Windows (with QuickBooks 2023 & 2021 installed)

How to Connect via RDP

```
# From Linux/Mac terminal:
xfreerdp /v:aiagent.hostedremotedesktop.com:4420 /u:'VM-4420-11\AIAgent' /p:'01Hello02!@!' /w:1920 /h:1080

# Or use any RDP client (Remmina, Microsoft Remote Desktop, etc.)
```

2. GitHub Repository

Detail	Value
Repository URL	https://github.com/LetsLearnAboutIt/QuickBooks-TimeWarp
Authentication	Personal Access Token (PAT)

How to Authenticate with GitHub

```
# Clone with PAT embedded in URL:
git clone https://<PAT_TOKEN>@github.com/LetsLearnAboutIt/QuickBooks-TimeWarp.git

# Or configure credential helper:
git config --global credential.helper store
# Then on first push/pull, enter username + PAT as password

# Or set remote with token:
git remote set-url origin https://<PAT_TOKEN>@github.com/LetsLearnAboutIt/QuickBooks-TimeWarp.git
```

Note: PAT tokens expire. If authentication fails, generate a new PAT at <https://github.com/settings/tokens> with `repo` scope.

3. QuickBooks Installation Paths

Application	Path
QB 2023 Premier Accountant	C:\Program Files\Intuit\Quickbooks 2023\QBWPremierAccountant.exe
QB 2021	C:\Program Files (x86)\Intuit\QuickBooks 2021

Company File Paths

File	Path	Size
QB 2023 Company File	C: \Users\AIAgent\Desktop\AirM asters\Air-Masters- QB-2023.qbw	~360 MB
QB 2021 Company File	C: \Users\Public\Documents\Int uit\QuickBooks\Company Files\Josh Safty 2021.qbw	~13 MB

4. Application Deployment

Detail	Value
Deployment Location	C:\QB-TimeWarp on the Windows VM
Project Framework	.NET 6.0, x86, Windows-only
Source Code (Linux)	/home/ubuntu/QB-TimeWarp/

How to Build and Deploy

```
# 1. On Linux (development machine), build the project:
cd /home/ubuntu/QB-TimeWarp
dotnet publish -c Release -r win-x86 --self-contained true -o ./publish

# 2. Copy published output to Windows VM:
scp -r ./publish/* AIAgent@aiagent.hostedremotedesktop.com:C:/QB-TimeWarp/
# (Or use RDP file transfer / shared folder)

# 3. On the Windows VM, run:
cd C:\QB-TimeWarp
QB-TimeWarp.exe
```

Alternative: Build on Windows VM

```
# On the Windows VM (if .NET SDK is installed):
cd C:\QB-TimeWarp
dotnet build -c Release
dotnet run
```

Important Build Notes

- **Must target x86:** The QBXML SDK is 32-bit only
- **QuickBooks must be running:** The SDK connects to a running QB instance via COM
- **Company file must be open:** Open the company file in QB before running the tool
- **Single-user mode recommended:** For reliable SDK access during migration

5. Configuration Files

File	Location	Purpose
appsettings.json	Project root	Main config: QB paths, export/import settings, transformation rules
Configuration/FieldMappings.json	Configuration folder	Field mappings, format rules, data type constraints

Key Configuration Toggles

```
{
  "TransformationRules": {
    "ReactivateInactiveEntities": true, // Convert inactive → active
    "PreserveClassTracking": true,      // Maintain class assignments
    "MatchAccountingModel": true       // Match Cash/Accrual basis
  }
}
```

6. Output Directories

Directory	Purpose
.\ExportedData\	Exported JSON files from QB 2023
.\Schemas\	Extracted QB 2021 field schemas
.\Logs\	Application logs (Serilog)
.\Validation\	Validation reports (JSON format)

7. Network & Environment Notes

- The Windows VM has a **2 Gbps fiber connection** — file transfers and SDK operations are fast
- QuickBooks SDK operations are **single-threaded** due to COM constraints
- Large company files (360 MB) may take significant time to fully export
- The VM may have RDP session limits — reconnect if disconnected
