

PATH_REFERENCE.md — Quick Reference for All File Paths

Last Updated: May 19, 2026
IMPORTANT: All folder and file names use **underscores instead of spaces** for Windows path compatibility.

Why Underscores?

Spaces in Windows file paths cause issues with:

- Command-line tools that don't handle quoted paths correctly
- Batch scripts and PowerShell commands
- Git operations and SSH file transfers
- COM/SDK path resolution

Joseph renamed all files/folders on 2026-05-19 to remove spaces.

Desktop Company Files (ORIGINALS — READ-ONLY)
